Webinars, our Open Philosophy, and More

Postman Monthly Newsletter: December 2019
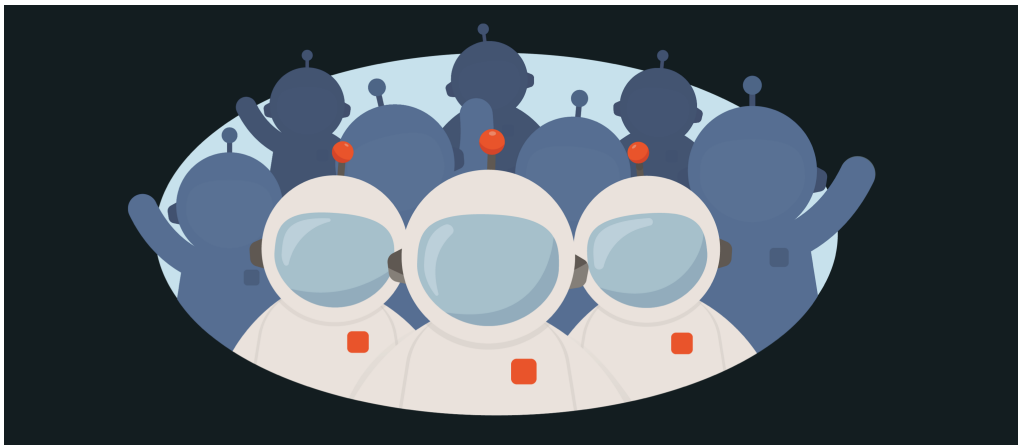

Collaboration Webinar Coming December 17th

Postman makes collaboration easier, and we'll be showing you our top collaboration tips and tricks during our live webinar on December 17th at 9am PST. You'll learn how to:

- Share collections and environments
- Manage changes over time with version control
- Create a team profile
- Make your team discoverable
- Create and share collections on the Postman API Network

Your brilliant and charming Postman hosts, Solutions Engineer Matt Ball and Developer Advocate Arlemi Turpault, will also cover best practices for collaboration, including how to manage your changelog, delegate roles and permissions, and organize your API development environment.

Register for the Webinar

Postman Visualizer Webinar On-Demand

Have you ever wished your request responses were more human-readable? Have you ever had to scroll through dozens of lines of JSON or XML to find the data you needed? If so, the Postman Visualizer—a new and easy way to work with API data —is for you. Check out our recent Visualizer webinar, which is now available on-demand.

The Postman Open Philosophy

From the very beginning of Postman, we open sourced the Postman Runtime, Postman Collection Format, and our SDKs to allow developers the flexibility to work with APIs in any environment or workflow. Openness is a foundational element for Postman, from open source projects and specifications to transparency in our roadmaps and community interactions, and we recently created a page to share it all with you.

Open It Up

Postman Meetups

- Join us for our 12/9 Paris meetup, led by Developer Advocate Arlemi Turpault, covering all things testing and automation in a hands-on workshop.

- Drop by our 12/10 Seattle meetup, hosted by Chief Evangelist Kin Lane, to hear about Postman Visualizer and API collections. We'll also have two stellar guests speaking about their use of Postman and API Gateways:
    - Geraldine Zanolli (a.k.a "Gigi"), developer advocate at Tableau Software
    - Liam Crilly, director of product management at NGINX

Postman News and Resources

Postman Follows Successful Series B With Two Key Hires

Postman announced two key executive team additions: Nick Tran as vice president of marketing and developer relations, and Kin Lane as chief evangelist.

The API Economy

Chief Evangelist Kin Lane walks you through how the API economy came about and how you can help shape it in an increasingly digital landscape.

Intermediate API Skills: Workflow Collections

Kin Lane continues his API skills series with workflow collections.

Visualizing Open Brewery Data with Bootstrap

Engineering Manager Tristan Denyer shows you how to use Postman Visualizer to more easily and effectively digest data returned from Open Brewery DB.

How We're Protecting Your Postman API Keys in GitHub

We've implemented a new token-scanning service in GitHub that will notify you if you accidentally commit a Postman API key to a public repository.

UI Testing with Postman

Software Developer Ankit Muchhala teaches us how to use Postman's API testing features to continuously test your application's UI.

Bringing law and order to APIs with OpenAPI Specifications

Developer Advocate Lead Joyce Lin lets you know how to bring law and order to APIs with OpenAPI Specifications.
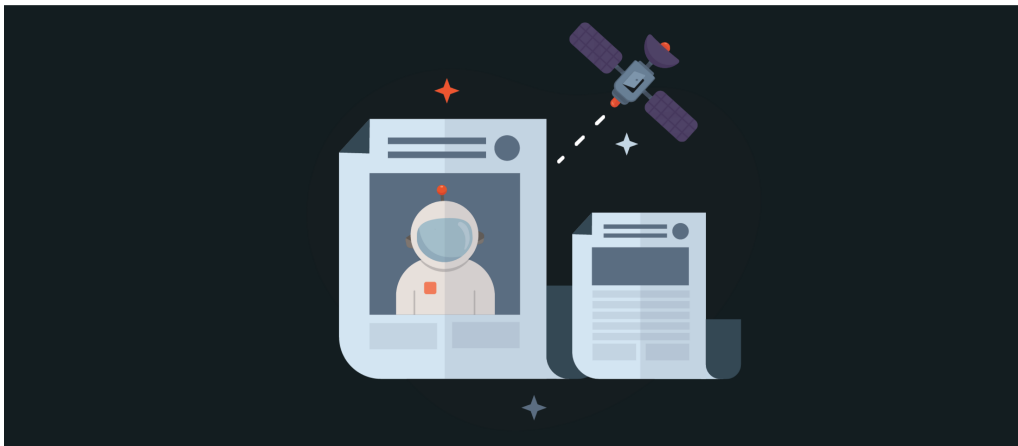

Community Tutorials, Blogs, and Press

SaaS Mag ranked Postman 12th in their 2019 list of fastest-growing SaaS companies.

Dev Odyssey has been putting out some superb Postman tutorials lately—check out this one on how to visualize your API data.

Software Engineering Radio spoke with Postman CEO and Founder Abhinav Asthana in this episode on designing and testing APIs.

Quality Engineer André Koene covers how to successfully implement your automated API tests in Postman.

Bleeding Code shows us how to troubleshoot slow APIs with a built-in breakdown of request events.

Software Development Engineer Emmanuel Balpe walks you through how to utilize Postman and Newman for stress testing.

Postman Co-founder and Director of Product Ops Abhijit Kane spoke with YourStory about his journey to Postman from his first computer to supporting a community of over 8 million developers.
